FERNO MEGASUS Trolley

Transport larger patients safely with better comfort to the patient

Bariatric trolleys need to perform two vital functions, keep the patient comfortable and secure, and ensure that the operator can perform their job easily and without risk of injury. **The Megasus** is Ferno's highly effective solution to this challenge, designed to carry patients up to 400kg and to accommodate their associated physical body mass.

The trolley's configurability, high load capacity and excellent manoeuvrability also afford operators another major advantage – it allows a standard ambulance to attend call-outs which might otherwise have required a specialised vehicle.

- **Lift heavier patients safely and easily** – 400 kg in lowest position, 200 kg in the raised
- **Additional comfort and space** – extendable cotsides, allowing a larger mass capacity as and when required
- **Excellent security** – Complete four-point body harness and leg restraints
- **Operation without strain** – dual action raise/lower hydraulics, gas-strut assisted backrest, extendable push/pull handles at both ends, optional detachable push-poles at foot-end

Megasus with cotsides fully extended

Megasus with option of detachable push-poles at foot-end

Part Nos:

MEGBIO-STD-AB	Megasus c/w ABPR Mattress, extending cotsides, Biosafe restraints, Standard 2 Part Lock
